PEG.MARKETS REFRESH · 11 FRAMES · ROUND 2

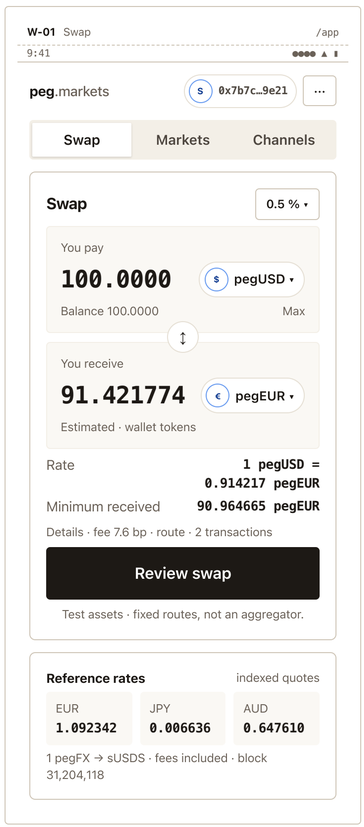

peg.markets, in frames

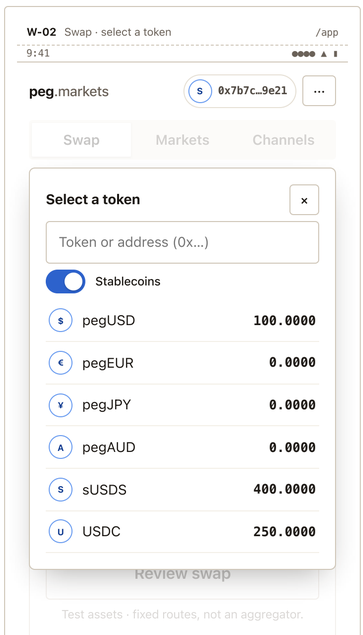

The peg.markets app as a wireframe sheet, simplified to the owner's original flow — Swap, Markets, Channels and the wallet — and drawn in the live build's vocabulary: segmented tabs, grey inset amount panels with a token pill, one dark primary, details behind a disclosure. Every frame has an id the design brief cites (`docs/DESIGN-CHALLENGE.md`); the sheet prints to `docs/refresh-wireframe.pdf`.

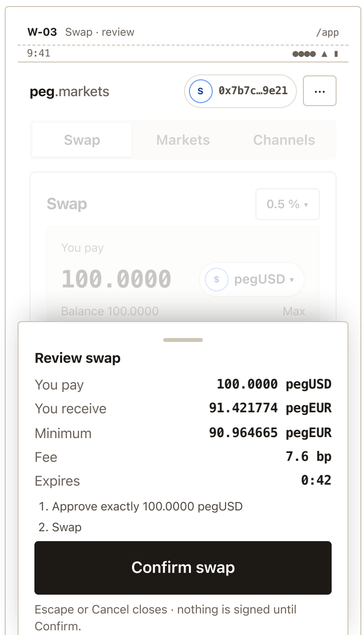

SWAP · 3 FRAMES

Swap

One card: what you pay, what you receive, the rate and the minimum. The fee, route and transactions sit behind Details; picking a token and reviewing open over the card.

MARKETS · 4 FRAMES

Markets

A market is a currency backed by sUSDS. The list shows supply and liquidity; a market opens on your position with one Mint / Liquidity switch, and the desktop puts list and market side by side.

W-04 Markets — /app/markets

peg.markets — 0x7b7c…9e21 — ···

Swap | Markets | Channels

Markets

collateral sUSDS

	supply	liquidity
USD — pegUSD · sUSDS	1.52M	4.00M, locked 15 %
EUR — pegEUR · sUSDS	210K	1.20M, locked 5 %
JPY — pegJPY · sUSDS	0	800K, locked 0 %
AUD — pegAUD · sUSDS	95K	600K, locked 10 %

Supply is outstanding debt in the peg token, not circulating supply. Liquidity is LP collateral in sUSDS.
